AVfusion Release

Notes Version 3.1.0

What's New in AVFusion Version 3.1.0

Simplified Installation Process

- The Client installation process has been made easier by automatically uninstalling the previously installed client and preserving the client configuration file for use with the new installation.
- The Server installation has been made easier by combining all of the server installation files in one installation routine
- An Installation manual is now available and can be found in IPVideo Corporations' website at <http://ipvideocorp.com/Support/Documentation>

Configuration and Customization of the AVfusion Product

- Included in this release is a new Configuration Utility which allows users to configure as well as customize the AVfusion Product. Here are some of the many useful configurable settings easily customized via the utility:
 - Room and Channel/Camera names can now be easily customized utilizing the new Configuration Utility provided as part of this release.
 - The video storage path as well as the video file name can be customized via the utilization of tokens.
 - The "life" of the recorded video can be set. **Currently, as configured from the factory, all video recordings will be deleted 365 days after they were recorded.**
 - A Configuration manual is now available and can be found in IPVideo Corporations' website at <http://ipvideocorp.com/Support/Documentation>

Improvements in Recording Quality

- Recording quality has been improved. "Waterfall" effects in the recorded video have been eliminated.

Improvements in the User Notes Field

- The user now can add a standard template to the user notes fields which can contain additional fields to be entered by the user or may automatically be filled by use of standard tokens such as interviewer name.
- The user may now enter Notes after a room is QUEUED.

The PDF Export Function

- The PDF export now includes the Interview Details as a header to the list of notes and bookmarks.

Improved Search Function

- The search function now correctly returns the recordings with the specified search criteria.

Improved Video Display

- Live and recorded video is displayed more quickly
- Synchronization between cameras has been improved.

User Login Improvement

- User login response time has been improved
- The enter key will initiate the login request
