

OVERVIEW:

AXIS 5.01+ Driver Selection

This is considered to be a “universal” driver for all of the new AXIS products with Version 5.X firmware. All of the AXIS Cameras/Encoders with 4 digit model numbers use version 5.0 or later firmware, so if a customer has a camera that is not yet added to our Supported List, that falls under this category, use this driver until a Device specific driver is developed.

Select the PTZ selection for all PTZ Cameras.
