

How do I Designate a Network Card to Listen for Connections from the Monitor Station?

Solution

If you have more than one Network Card (NIC) installed in your computer, you can use the Network Options to designate which one will listen for connections from the Monitor Station.

1. Open the IP Server Manager and click Network Options.
2. From the "Select Network Card" drop down, pick the IP Address you want to listen for SentryVMS Client connections.
3. Click OK when finished.
