

Title: IP Server will not start

Product: SentryVMS IP Server

Brief: IP Server fails to start.

Solution: Verify if demo version is within its 60 day window.

On the SentryVMS Server, Right click on IP Server icon in the system tray. Select "Server Configuration", the IP Server Manager window will open up. Select "System Log", the System Log Viewer window will open up. If the latest system log says: "Error: Demo Mode has expired", then the demo license is out of the 60 day demonstration period.

Please contact IPVideo support for purchasing options.
