KEY WORD ALERTING  |  GUNSHOT DETECTION  |  AGGRESSION & LOUD DISTURBANCES

The award-winning HALO Smart Sensor is expanding across industries as the preferred security solutions for privacy areas, where you can’t place a camera or record conversations, with its new spoken key word, gunshot detection and Air Quality Index (AQI) features.

HALO detects environmental changes that occur in these privacy concern areas and as a device on the network, it sends email, text and security platform alerts to designated security personnel. HALO can detect flammables, hazardous chemicals, air quality changes such as vaping and smoking and changes in temperature and humidity. HALO can also detect noise level fluctuations and can send alerts when unusual activity occurs such as a gunshot or aggressive behavior like fighting.

With its key word detection, a daughter in her dorm room, a hotel housekeeper, a patient in duress, a student in a hazing incident or an elderly parent living by themselves can alert security to an attack or emergency in real time.

HALO will also analyze room occupancy through light detection in addition to monitoring temperature, humidity, pressure and air quality. HALO includes a built-in tamper detection alert.

HALO’s Air Quality Index (AQI) will alert when air quality levels fall in the danger zone for spreading disease, reducing the spread of virus particulates and regularly monitoring to align with industry and government standards.
